13. ABSTRACT (Maximum 200 words) Qualification tests were performed to determine whether the in-service PPP-B-601 Wood Box used for shipping and storage of 300 Grains per Foot Flexible Linear Shaped Charges could be utilized to contain properly dunnaged solid type hazardous materials weighing up to a gross weight of 21 kg (46.2 pounds). The tests were conducted in accordance with Performance Oriented Packaging (POP) requirements specified by the United Nations Recommendations on the Transportation of Dangerous Goods, ST/SG/AC.10/1 and the Code of Federal Regulations, Title 49 CFR, Parts 107 through 178. The wood box has conformed to the POP performance requirements; i.e., the box successfully retained its contents throughout the specified tests.

INTRODUCTION

This Performance Oriented Packaging (POP) test was performed to ascertain whether the PPP-B-601 wood box used for shipping and storage of the 300 Grains per Foot PETN Flexible Linear Shaped Charge meets the Packing Group II requirements specified by the Code of Federal Regulations, Title 49 CFR, Parts 107 through 178, dated 31 December 1991. The objectives were to evaluate the adequacy of the container in protecting the hazardous materials.

The box tested conforms to PPP-B-601 and contains one twenty-foot charge on a spool. Two steel straps, one on each axis about the center of the box, were used to secure the box during the tests. The box is shown, as tested, in figure 1.

TESTS PERFORMED

1. Drop Test

This test was performed in accordance with Title 49 CFR, Part 178, Subpart M, Sec. 178.603. One container was used for each drop orientation. The drop height was 1.2 meters and the drop sequence was as follows:

- a. Flat on Bottom
- b. Flat on Top
- c. Flat on Long Side
- d. Flat on Short Side
- e. One Corner

The test was performed at ambient temperature ($70^{\circ} \pm 20^{\circ}\text{F}$). The contents of the container should be retained within its packaging and exhibit no damage liable to affect safety during transport.

2. Stacking Test

This test was performed in accordance with Title 49 CFR, Part 178, Subpart M, Sec. 178.606. Three different containers were used, each with a stack weight of 4400 pounds. This represents the weight imposed on the bottom container of a sixteen-foot stack of like containers weighing 46 pounds each. The test was performed for 24 hours. After the allowed time, the weight was removed and the container examined. Any leakage, deterioration, or distortion which could adversely affect transport or reduce its strength or cause instability in stacks of packages is cause for rejection.

3. Base Level Vibration Test

This test was performed in accordance with Title 49 CFR, Part 178, Subpart M, Sec. 178.608. Three sample containers were loaded with brass weights and dunnage and closed as for shipment. Each container was placed on a vibrating platform that had a vertical double-amplitude (peak-to-peak displacement) of one

Figure 1. PPP-B-601 Wood Box for
300 Gr/ft PETN Flexible Linear
Shaped Charge, before tests.

inch. The packages were constrained horizontally to prevent them from falling off the platform, but were free to move vertically, bounce and rotate. The test was performed for one hour at a frequency that caused each point of the container bottom to be raised from the platform 1.6 mm. A 1.6 mm thick metal strip was passed between the bottom of the container and the platform.

PASS/FAIL

1. Drop Test

The criteria for passing the drop test is outlined in Title 49 CFR, Part 178, Subpart M, Sec. 178.603(f): A package is considered to successfully pass the drop test if for each sample tested, no rupture occurs which would permit spillage of loose explosive substances or articles from the outer packaging.

2. Stacking Test

The criteria for passing the stacking test is outlined in Title 49 CFR, Part 178, Subpart M, Sec. 178.606: No test sample may show any deterioration which could adversely affect transportation safety or any distortion likely to reduce its strength, cause instability in stacks of packages, or cause damage to inner packagings likely to reduce safety in transportation.

3. Base Level Vibration Test

The criteria for passing the Base Level Vibration Test is outlined Title 49 CFR, Part 178, Subpart M, Sec. 178.608: Immediately following the period of vibration, each package must be removed from the platform, turned on its side and observed for any evidence of leakage. A packaging passes the vibration test if there is no rupture or leakage from any of the packages. No test sample should show any deterioration which could adversely affect transportation safety or any distortion liable to reduce packaging strength.

TEST RESULTS

1. Drop Test

Satisfactory.

2. Stacking Test

Satisfactory.

3. Base Level Vibration Test

Satisfactory.

DISCUSSION

1. Drop Test

After each drop the container was inspected for any damage which would be cause for rejection. The impacted corner of the box used for the corner drop is shown after the test in Figure 2. In all cases, the container remained intact and there was no spillage of contents.

2. Stacking Test

Three containers were individually tested. Each container was visibly inspected after the 24-hour period was over. There was no leakage, distortion, or deterioration of the container as a result of this test.

3. Base Level Vibration Test

Immediately following the vibration test, each container was removed from the platform, turned on its side and observed for any evidence of leakage. All containers remained securely closed and there was no evidence of leakage of contents.

DATA SHEET

CONTAINER: PPP-B-601 Wood Box for 300 Gr/ft Flexible Linear Shaped Charge		POP MARKING: <div>u n</div> 4D/Y21/S/** USA/DOD/NAD	
Type: 4D		UN Code: 1.1D	
Specification Number: PPP-B-601		Material: Wood	
Gross Weight: 21 kg (46.2 pounds)		Dimensions: .76m L x .76m W x .05m H (30.00" L x 30.00" W x 2.00" H)	
Closure (Method/type): 2 Steel straps		Tare Weight: 14.5 kg (32.0 pounds)	
Additional Description: Box contains one twenty-foot charge coiled on a spool.			

PACKAGED COMMODITY: Charge, Shaped, Linear, Flexible (300 Grains per Foot PETN) M029, 1375-01-027-6251			

Proper Shipping Name: Charges, Shaped, Flexible, Linear			
United Nations Number: 0288			
United Nations Packing Group: II			
Physical State: Solid			
Amount Per Container: One twenty-foot charge			
Net Weight: 5.4 kg (12.0 pounds)			

PACKAGED COMMODITY USED FOR TEST: Name: Steel rods Physical State: Solid			
Size :.02m Dia x .15m L (1.00" Dia x 6.00" L)			
Quantity : 13			
Net Weight: 6.5 kg (14.2 pounds)			
Dunnage: Fiberboard
